**Project Title** : Advanced UPnP Design Based User Authorization And Authentication For Ubiquitous Computing Environment

**Domain** : Networking

**Project Description:**

Security is a key concern in a wide spread network. Each individual user needs to get authentication and authorization to access the resources in the network. There are two zones i.e. Media Upload Zone to upload and Media Access Zone to access. The two levels of security are Low and High. If a file is uploaded with a Low level security, the user has to request the admin to access the media. Now the admin verifies whether the user is authenticated, after getting the confirmation from the admin and then responds to the requested user. Consider the media is uploaded with High level security; the user has to request the admin to access the file. Since the security level is high, the request will be sent to the admin's android mobile. Now the admin decides whether the user is authorized as well as authenticated then the admin allows the user to access the file.
